Benefits of a clean PC

“A well-managed desktop can save money – a 42% savings for a well-managed desktop compared with an unmanaged one.”
– Gartner

PCs with hard drives cluttered with unused and temporary files run slower and are more prone to crashing, while cookies and internet history pose a risk to security and privacy. This document explains how CCleaner Cloud enables the centralized cleaning and optimization of all the PCs in your organization to boost speed, performance and security, and free up valuable disk space.

CHALLENGES

Slow computers
End employees are increasingly dependent on web-based applications and are spending more and more time accessing information via browsers. But when browser activity, history, temporary files, and downloads accumulate, the result is slower performance. By optimizing PCs on a continual basis, a company can save IT costs. According to Gartner, “a 42% saving for a well-managed desktop compared with an unmanaged one”. Extending PC life by two years will save up to $4,300 per user.

Identity theft
While redundant information such as temporary files and browser history fills disk space, it also jeopardizes user privacy and company security. One software firm’s recent test indicates that at least 76% of internet users are vulnerable to history detection. With the increased use of browser-based and cloud-based applications, an employee’s internet history becomes even more vulnerable. This potentially threatens company and user passwords, as well as confidential and sensitive data. Seemingly deleted files and sensitive corporate and personal information buried on hard drives can be recovered easily by anyone possessing the right tools.

Unstable systems
At the backbone of every Windows system is the Registry, and its maintenance is vital to avoiding operating and performance problems. The Windows Registry is prone to collecting redundant and corrupted entries. Signs of trouble include constant computer system crashes, stalls, and slower computer processes. In addition, spyware can leave behind keys in the Window's registry that may not be removed by all anti-spyware software.
Corporate security

A company without a comprehensive IT security policy is exposing itself to risk, which can result in significant expense. Forensic costs of up to $100,000 for a small breach can easily add up because accountants, attorneys, and computer technicians need to identify the exposure of confidential information and subsequently notify second and third parties. Costs of up to $15 per record are required to notify all parties affected by a security breach. Most states also require that when an individual's readily identifiable information – such as social security number or birth date – is disclosed, he or she must be offered credit monitoring services for up to one year, costing as much as $25 per record. Data breaches can harm a company's reputation, causing irreparable harm. Depending on the size of the company and depth of the breach, rebuilding brand confidence could cost millions. Deleted files and sensitive corporate and personal information buried on hard drives can be recovered easily by anyone possessing the right tools.

IT maintenance

In the past, cleaning a company’s entire fleet of PCs and laptops efficiently on a system-wide basis was not possible. In an attempt to overcome slow performance or slow startup times, individual users might try to optimize their PCs by themselves. Or they had the option of hand-delivering their machines to the company help desk for maintenance. In some cases, optimization and cleaning only occurred when IT staff reconfigured old PCs for new employees.

SOLUTION

CCleaner Cloud cleans and optimizes all computers throughout a business to solve and prevent common problems faced by end users. It frees up valuable hard disk space, increases speed, boosts security and ensures that Windows runs efficiently. By better maintaining the health of a company's machines, the solution effectively prevents costs associated with hardware upgrades, security breaches and avoidable helpdesk tickets.

CCleaner Cloud is the cloud-based version of the hugely popular and award-winning CCleaner for Windows app. From a web browser, an IT administrator can clean and optimize all the computers across their organization wherever they are, as long as they have an internet connection. This means that they don't have to visit employees' desks to check every PC. By automating tasks in this way, both time and money are saved.
Internet optimization
CCleaner Cloud cleans unwanted data from your organization’s PCs; you can even set it to do this automatically at a scheduled time and date of your choice, resulting in dramatically faster web navigation, faster boot times, and faster applications. These improvements allow greater productivity for users as they enjoy more efficient web browsing and better, more reliable access to web apps and internet-based tools.

Optimization of the Windows Registry
Registry cleaning through CCleaner Cloud enables the remote removal of Window's registry errors for all machines across your organization reducing the likelihood of crashes and other performance issues.

Fraud prevention and security
CCleaner Cloud uses military grade techniques to make sure confidential documents can never be recovered, bolstering security, and reducing the risk of identity theft and fraud.

CCleaner Cloud Benefits

CCleaner Cloud makes computers cleaner, faster, and safer, which results in increased productivity for the user, and increased security and lower costs for the company. A well-managed PC runs more efficiently for a longer period, reduces the need for hardware upgrades, and reduces the threat of expensive security breaches.

CCleaner Cloud customers report up to a 50% reduction in helpdesk tickets, freeing up valuable time for the IT team to spend on more important projects.

- Cleans unwanted internet files from hard drives facilitating faster and more efficient use of web apps and tools
- Cleans PCs via an internet connection and removes Registry errors across entire networks, to improve Windows OS performance
- Helps prevent identity theft and fraud
- Delete confidential documents to a military-grade level, so they can never be recovered
- Get greater return on your company’s hardware investment
- Use Defraggler to defrag hard drives and optimize SSDs using the TRIM function
- Use Speccy for detailed insights into hardware specifications and more
- Install and unistall software and manage Windows updates remotely
- Get alerts about potential problems before they occur

Benefits to administrators include:

- Group actions
- Auditing
- Reporting
- Scheduling

Clean all areas of Windows plus third-party software

Windows
Recycle bin, temporary files, recent document history, log files, clipboard, memory dumps, error reporting data, broken shortcuts

Google Chrome
Temporary internet files, history, cookies, recent URLs, form history, autocomplete data

Other browsers
Full support for all versions of Internet Explorer, Edge, Firefox, Opera, and Safari

Browser plugins
Flash, Silverlight, Adobe Reader

Other applications
Microsoft Office, Adobe Acrobat, and more than 200 other applications

SYSTEM REQUIREMENTS:
The CCleaner Cloud application supports Windows 7 and and other versions. CCleaner Cloud requires a minimum of 1GB of RAM and one of the following operating Systems:

Windows 7
Windows 8 / 8.1
Windows 10
Windows Server 2008
Windows Server 2012 / R2
Windows Server 2016
Windows Server 2019
